

First to offer 600GB Removable Storage

Videoswitch have upgraded their 4, 9 and 16 channel digital video recorders to include new hard drives that can provide massive 600gbytes storage of images.

Videoswitch are believed to be the first UK manufacturer to utilise the new Maxline hard drives, which are designed for 24 hours a day, seven days a week continuous recording. The reliability of the hard drives are backed by a three warranty from the manufacturer, Maxtor.

"We have introduced this significant increase in hard disc storage in response to what our customers have been telling us." said Roland Simmons of Video Switch. "Whilst end-users value many of the attributes of our latest digital video recorders, the ability to have 31 day recording with good frame rates is very much a priority."
